### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Sarah Smith, Reg. No. 50,488, on August 13, 2008.

2. The following changes to the drawings have been approved by the examiner and agreed upon by applicant: The duplicate drawing sheets, which contain figures 11 - 13 not labeled as prior art, are to be removed. In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

### ***Allowable Subject Matter***

3. Claims 1 - 7 are allowed.

4. The following is an examiner's statement of reasons for allowance:

The examiner did not find any prior art that taught or suggested a filter member, or the method thereof, comprising a filtering member comprising a cylindrical body formed by winding a wire there for filtering and cooling a gas by allowing the gas to pass through from an inside to an outside in a radial direction, wherein the cylindrical body is formed by laminating a plurality of pattern layers in the radial direction, the pattern layers being formed into a mesh form by traversing the wire between one winding end portion and an other winding end portion in an axial direction of the cylindrical body

while a traverse direction of the wire is reversed in one winding end portion and the other winding end portion, in the other winding end portion, a plurality of reversal positions are set to reverse the traverse direction of the wire, and a shortest distance in a circumferential direction between a first reversal position of the plurality of reversal positions and a second reversal position at which the traverse direction is reversed immediately after being reversed at the first reversal position is longer than a shortest distance in the circumferential direction between the first reversal position and a third reversal position located nearest to the first reversal position.

The following references represent the closest prior art: Japanese Publication Nos. JP 2001-171472 to Koyama, JP 2001-301561 to Ota, and JP 202-306914 to Ishii et al.; and US Patent Nos. 5,908,481 to Siddiqui, 6,945,561 to Nakashima et al., and 6,926,304 to Miyaji et al. These references all disclose filter members that can be formed by winding a wire to form a cylindrical body. None of these references, however, teaches or suggests a filter member having the shortest distance in a circumferential direction between a first reversal position of the plurality of reversal positions and a second reversal position at which the traverse direction is reversed immediately after being reversed at the first reversal position being longer than a shortest distance in the circumferential direction between the first reversal position and a third reversal position located nearest to the first reversal position.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Other prior art references listed on the PTO-892 (Notice of References Cited) are considered to be of interest disclosing similar filter members.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ROBERT A. CLEMENTE whose telephone number is (571)272-1476. The examiner can normally be reached on M-F, 7:00-3:30.
